

Company Info

- Founded in 1998, **Advanced Comfort Technologies**, Inc., DBA IntelliBED, manufactures the world's most advanced mattress centered around Intelli-Gel®, their proprietary technology.
- Intelli-Gel® is the most advanced cushioning material ever created for properly supporting the human body.
- Most mattress companies still manufacture with the same technology developed in the 1960's – these materials can off gas and even be harmful to the body. Through extensive research, doctor and patient interviews, and extensive third-party testing, IntelliBED designed and manufactured the first ever Gel medical-grade sleep surface.

The IntelliBED Difference

- It's all about Intelli-Gel. Found in all IntelliBED's mattresses
- Intelli-Gel's column buckling design redistributes weight and reduces pressure points up to 80% compared to biggest competition
- Intelli-Gel is made from the same non-toxic, BPA-Free material approved for use in baby bottle nipples children's toys. Primary ingredient: Baby Oil, less the fragrance.
- IntelliBED mattresses do not off-gas harmful substances like other foam mattresses.
- Rather than using a toxic spray-on fire retardant, IntelliBED 's uses a naturally fire resistant silica-fiber material that does not off-gas harmful substance.

IntelliBED Products:

- Medical-Grade Mattresses
