

Company Info

- Founded in 1998, **Advanced Comfort Technologies, Inc.**, DBA intelliBED[®], manufactures the world's most advanced mattress centered around Intelli-Gel[®], their proprietary technology.
- Intelli-Gel is the most advanced cushioning material ever created for properly supporting the human body.
- Most mattress companies still manufacture with the same technology developed in the 1960's – these materials can off-gas, and even be harmful to the body. Through extensive research, doctor and patient interviews and extensive third party testing, intelliBED designed and manufactured the first ever Gel medical-grade sleep surface.

The intelliBED Difference

- It's all about Intel-Gel. Found in all of intelliBED's mattresses.
- Intelli-Gel's column buckling design redistributes weight and reduces pressure points up to 80% compared to leading competitors.
- Intelli-Gel is made from the same non-toxic, BPA-Free material found in baby bottle nipples. Primary ingredient: Baby Oil.
- intelliBED mattresses do not off-gas like other foam mattresses.
- Rather than using a toxic spray-on fire retardant, intelliBED uses a fire retardant that is woven into the fibrous thread found inside the mattress, which isn't bio-available except in case of fire.
